# today = (datetime.datetime.now() + timedelta(hours=4)).date()

today = (datetime.datetime.now() + timedelta(hours=4)).date()
in database it will always store -4
but while storing in data base use -4 and save because in view it will show +4 from the hours value stored in db.

sudo chown -R csme2370a: meter-reader-ce/
change permission of the folder and sub-folder
run it from /bit_master

pgbouncer to handle db connections
pgbouncer running at port 6432
to do that i changed db_port from 5432 --->6432

**return bck the wizard which is target new to the existing form when submitted**
return {
